

As some of you may already know, HDSI is introducing Biometric Time Clocks to our robust line of products. The new time clock brings the flexibility of a full function time and attendance terminal together with the sophistication of the most accurate identification technology available. Using field-proven hand geometry biometric technology, the HandPunch uses the size and shape of your employee's hand to verify their identity each time they punch.

Fully compatible with HDSI's Time and Attendance Module, the HandPunch offers the following advantages and features:

- ◆ Provides the most accurate time and attendance solution available
- ◆ Eliminates Buddy-Punching
- ◆ Fast and easy to use
- ◆ Restrict employee punching outside of schedule time
- ◆ Ability to override restrictions and enter missed punches

### HandPunch Technology

Unlike badges or punch cards, a biometric reader ensures that no employee can punch for another. This in turn, eliminates time fraud and reduces payroll costs. Because a person's hand is unique, a biometric time clock provides a quick, accurate, and reliable way to record punches for an employee. With biometric technology, CFO's and controllers can ease the headaches of scrutinizing employee time and attendance. As a result, some companies report savings of up to 5% of total payroll costs.

By taking over 90 measurements of the fingers and part of the hand, the HandPunch can verify a person's identity safely and accurately. The terminal is fast and easy to use, in fact, an employee's identity is verified or rejected in less than a second. Improved payroll accuracy is guaranteed by the elimination of "buddy-punching." This means your payroll is free of time fraud, thereby lowering labor costs and giving you a fast return on your investment. With the HandPunch, your hand is your badge!
