

Medicare Reporting and Transmission

Our Medicare Module Features

- Create and Transmit HIPAA compliant Medicare ANSI 837data file; no need to enter claims individually
- Automatically track Medicare and co-insurance days
- Automatically track therapy visits and onset dates
- HDSI's Rate Program allows input of RUG classes quickly without the need to calculate any rates or dates. Rate factors updated as needed. Fully integrated with UB04 Statement program.
- Medicare Logs (A & B)
- Medicare Census File that allows editing of UB04
- Claim validation (bill type, status codes, Medicare number, doctor etc.) performed while your bills print to further reduce errors in transmission
- Claim listing available prior to claim transmission
- **Automated Ancillaries** will import charges for most 3rd party service providers (therapy, pharmacy, lab, etc) eliminating the need to manually input.
- Contractual & Non-Contractual Costs automatically posted to appropriate GL account
- Ability to control printing of CPT Codes (A vs. B)
- Automatically calculate and track benefits exhausted, partial benefits exhausted and no pay Medicare claims
- One step to add KX modifiers for approved therapy extensions
- Modifier 59 can be assigned automatically with ancillary input
